SUMMARY

Product Designer with 5+ years leading complex web and mobile products, from design systems and internal tools to AI-powered experiences. Uses research and data to find usability gaps, and works closely with engineering to solve them.

EXPERIENCE

Sewjo

July 2024 – Present

Lead Product Designer | Cross-Platform Product (iOS, Android, Web)

- Own design across 14 interconnected product areas and 200+ production screens, working with the founder and engineering to frame problems and set MVP scope.
- Designed onboarding, free trial, and subscription flows behind 8.4% signup-to-paid conversion and 2.6% monthly churn, with 30% of users aged 55+.
- Spotted under-engagement in a core workflow through Firebase data and user interviews, then redesigned it, contributing to a 35% increase in daily engagement.
- Designed a scalable feed architecture for content eligibility, privacy, renderability, relationships, and presentation, challenging an initial direction and turning an ambiguous problem into implementation-ready logic.
- Designed data-dense merchant and admin tools with tables, charts, report exports, permissions, and status queues, plus a service blueprint connecting merchant actions to backstage workflows.
- Built and govern the cross-platform design system, and mentor two junior designers through design reviews and critique.

Accenture

January 2026 – April 2026

Lead Product Designer | AI-Powered Web & Mobile Product

- Led end-to-end design of an AI product for decisions in a complex, unfamiliar domain, from problem framing and research through prototyping and QA.
- Treated a stakeholder-backed form-first direction as a hypothesis, tested it with 15 users, and brought the evidence and a working alternative to 30+ stakeholders, who aligned on a new direction.
- Designed how the AI explains itself, with clarifying questions, uncertainty, specific errors, fallbacks, and user review, grounded in SME-vetted sources through RAG.
- Designed agentic AI behaviour that adapts plans to changing conditions, creates tasks and reminders, and drafts changes for user approval.
- Owned research planning and synthesis; usability testing surfaced 22 findings, and 18 of 20 participants completed the core task unaided.
- Moved features from Figma into React code that engineers reviewed and integrated, speeding up delivery.

Building Blocks

January 2021 – July 2024

User Experience Designer | Desktop & Mobile Web

- Designed sign-up, onboarding, and activation flows for a two-sided platform connecting employers with recent graduates.
- Ran usability testing and used the findings to improve sign-up and core flows.
- Built and maintained a responsive design system with WCAG and AODA accessibility, working with product, engineering, and marketing.

EDUCATION

Simon Fraser University
Master of Digital Media
Focus: Interaction Design, AI & Strategy

George Brown Polytechnic
UX Design Certificate

York University
Bachelor of Arts, Law & Society

SKILLS

Product Design

End-to-End Product Design
Interaction Design
Information Architecture
Complex Workflows
Design Systems
AI & Agentic UX
Responsive & Mobile Design
Accessibility (WCAG)

Research & Strategy

User Interviews
Usability Testing
Field Research
Behavioural Analytics
A/B Testing
Success Metrics
MVP Scoping
