SUMMARY

Product Designer with 5+ years leading complex web and mobile products from problem framing to build, including AI products and design systems. Uses research and data to find usability gaps, and works closely with engineering to solve them.

EXPERIENCE

Sewjo

July 2024 – Present

Lead Product Designer | Cross-Platform Product (iOS, Android, Web)

- Lead design across 14 product areas and 200+ production screens, working closely with the founder on what to build, how to scope it, and how to measure success.
- Designed the subscription lifecycle, from pricing and trials through upgrades and cancellation, supporting 8.4% signup-to-paid conversion and 2.6% monthly churn.
- Used analytics and interviews to identify friction in a project tracking feature, then redesigned it around quick actions, contributing to a 35% increase in daily engagement.
- Challenged the initial activity feed approach and designed its decision logic, defining the eligibility, privacy, and display rules for every type of content.
- Designed dashboards that help merchants manage synced Shopify catalogues and track performance, plus internal tools for moderation and bug reports.
- Built Sewjo's cross-platform design system from scratch and set its contribution standards, mentoring two junior designers through design reviews and critique.

Accenture

January 2026 – April 2026

Lead Product Designer | AI-Powered Web Application

- Challenged the original form-first design by testing it with 15 users, then designed the conversational AI approach that stakeholders approved.
- Designed the end-to-end conversational experience, from guided inputs and clarifying questions to AI thinking states, error recovery, and review screens.
- Designed AI-assisted plans that adapt to changing conditions and suggest next steps, with users reviewing and approving changes before they apply.
- Designed an interactive map where users outline their property by tracing its boundaries, and worked with engineering to evaluate mapping APIs for feasibility.
- Led usability testing with 20 participants, with 18 completing the core task unaided; synthesized findings into prioritized improvements with engineering.
- Built front-end interfaces with Claude Code so engineers could focus on back-end work, with engineering reviewing and integrating the code.

Building Blocks

January 2021 – July 2024

User Experience Designer | Desktop & Mobile Web

- Designed sign-up, onboarding, and mentor-matching flows for a nonprofit platform connecting new graduates with mentors.
- Ran usability testing and used the findings to improve sign-up and core flows.
- Built and maintained a responsive design system with WCAG and AODA accessibility, working with product, engineering, and marketing.

EDUCATION

Simon Fraser University
Master of Digital Media
Focus: Interaction Design, AI & Strategy

George Brown Polytechnic
UX Design Certificate

York University
Bachelor of Arts, Law & Society

SKILLS

Product Design

End-to-End Product Design
Interaction Design
Information Architecture
Complex Workflows
Design Systems
AI & Agentic UX
Accessibility (WCAG)

Research & Strategy

User Interviews
Usability Testing
Behavioural Analytics
A/B Testing
